

Printer Care Program

Switch to SensaBand™ direct thermal wristbands, and Caresfield will provide you with plug-and-play printers*

New!

Our new Printer Care Program was created to help your organization address these all-too-common issues:

- Your current printer vendor has discontinued your model, forcing you into an expensive upgrade
- You have recently upgraded your printer, only to find out the new model will only work with the vendor's wristbands at 10X the price
- You are using costly laser printers because your organization's IT department cannot take on a project to change printer workflows.

Program Highlights

Select Caresfield's patient identification solution that includes SensaBand direct thermal wristbands and XPress Systems™ direct thermal printers.

By purchasing SensaBand, the cost of the XP-320W printer will be included at no additional cost.*

Caresfield will take care of the printer's maintenance, service, repairs, or upgrade.**

* Included printer cost or discounts will be determined based on the customer's committed wristband usage per printer per day.

** Upgrades to XPress Systems printers will be eligible in the event the printer fails or is obsoleted.

Let's talk!
